TDD and MOQ

1. Generate Following Classes , Methods & properties using TDD approach:

```
class customercustdet
{
    public IList<customer> ShowallCustomers()
    {
//code to display all customers
    }

    public IList<customer> ShowacustomerbyId(int id)
    {
// code to display customerby id
    }
}

class customer
{
    public int cid { get; set; }
    public string cname { get; set; }
    public DateTime Dob { get; set; }
}
```

Note : perform unit testing for showallcustomers and showcustomerbyid to check
if result is > 0

2. Simulate above code to use MOQ framework
